SUMMARY

Motivated Full stack developer with a hobby of creative art and design looking for a fast-paced, collaborative internship or co-op.

EDUCATION

Virginia Commonwealth University

Expected Graduation: May 2027

Bachelor of Arts in Computer Science

Minor: Creative Writing

GPA: 3.55

University of Richmond

Graduated: Feb 2024

Certificate in Full Stack Web Development

GPA: 4.0

Brightpoint Community College

Graduated: May 2022

Associate's in General Studies

GPA: 3.18

RELEVANT COURSES

Computing and Data Ethics • Introduction to Object-Oriented Programming • Introduction to Data Structures • Computer Organization • Programming Languages • Fundamentals of Software Engineering • Algorithm Analysis with Advanced Data Structures • Databases • Intro to Cryptography • Software as a Service

SKILLS

Passions and Proficiencies: HTML • CSS • Javascript • SQL • NoSQL • GraphQL • Python • Java • Rust • MySQL • GIT • GitHub • MongoDB • Express • React • [Node.js](https://nodejs.org/) • Handlebars • jQuery • Bootstrap • Supabase
Interested and Learning: [Vue.js](https://vuejs.org/) • Apollo • Angular • .NET • [Next.js](https://nextjs.org/) • Natural Language Processing • LLM • Azure • Amazon AWS

RELEVANT EXPERIENCE

Teaching Assistant, VCU School of Engineering, Richmond, VA

Fall 2026

- Tutored and assisted students in learning Introduction to Problem-Solving at Virginia Commonwealth University. Helped instruct a class of 40 students how to code in Python during lab assignments.
- Graded and gave feedback to projects and homework.

Lead Coder and Pagebuilder, Blackbird Founder's Archive, Richmond, VA

Spring and Fall 2024

- Refactored 45 pages in the BlackBird Archive, a 22 year old website, to run without Adobe Flash. I also parsed through hundreds of static sites to fix both minor spelling errors and broken webpages with outdated imports.

Programming Intern, Blackbird Literary Magazine, Richmond, VA

Spring 2023

- Assisted in the development of [Blackbird.vcu.edu](https://blackbird.vcu.edu), Vol 21 n3 edition. I was in charge of stylizing each piece according to the author or poet's creative vision, placing words on the page exactly as they would be

stylized on paper. I was responsible for a total of 141 poems, fiction prose, nonfiction literature, and biographies, and despite each page being static .html files, I completed the deadline 1 week ahead of schedule.

PROJECTS

Percyphone, Freelance Production, Richmond, VA

Fall 2026

<https://github.com/kizirkle/percyphone> | <https://percyphone.vercel.app/>

- Developed an operational e-commerce website with agile development for a client so that they could move their business off of Etsy, which takes a considerable percentage of revenue. Etsy took 25% of revenue from this seller per transaction, and with my website, the revenue that was taken dropped to 2% for Snipcart's user fee. I delivered MVP alone in three weeks time.
- Utilized Snipcart for transaction handling, React, HTML5, CSS3, Bootstrap, and Font Awesome for the front end design, and Javascript, Bcrypt, Express, Supabase, and PostgreSQL for the back end database. Added a webhook to dynamically change the stock of each object through Snipcart's transaction API.
- The next two sprints will involve adding a WYSIWYG editor for descriptions, creating a Hot Items section using another Snipcart Webhook, and building my Event routes for my client to advertise comic cons that they will be attending.

RemindRX, Fundamentals of Software Engineering, VCU, Richmond, VA

Spring 2026

<https://github.com/kizirkle/RemindRX> | <https://remind-rx-807d225f49a6.herokuapp.com/>

- A 6 person group, including me, developed a medication adherence platform that allows users and doctors an effective communication for when and how prescribed medicine is being taken. I was responsible for the login and add medication functionality for this project, and was the primary bug fixer, especially in regards to Github merge conflicts. I was also the one who hosted the live site on Heroku.
- Used HTML5, CSS3, and EJS, for the front end, and Javascript, Express, MySQL, Node, and Github for the back end.

Fight My Dad!, Full Stack Programming Certificate, Richmond, VA

Spring 2024

<https://github.com/SeeYouThursday/Fight-My-Dad> | <https://fmd-jade.vercel.app/>

- Worked in a 4 person group, which curated and launched an interactive browser game allowing users to create and fight characters with fake 'attack statistics' based on their dads. We achieved MVP 2 days ahead of schedule. I worked in the front end, creating forms and the dashboard. I also hand-drew all necessary assets. Unfortunately, the site is no longer functional due to my team falling out of touch and our database cluster being cancelled.
- Utilized React and Vite for the front end, and JavaScript, Apollo Server, Bcrypt, GraphQL, JsonWebToken, MongoDB, and Mongoose for the backend.

Voyage, Full Stack Programming Certificate, Richmond, VA

Fall 2023

<https://github.com/kizirkle/travel-blog> | <https://voyage-d71d026c4a0e.herokuapp.com/>

- Worked in a 3 person group and developed a travel experience platform which enabled users to share reviews for various companies and experiences in places they travel to. I was in charge of the database routes.
- Employed HTML5 and CSS3 for the front end, and JavaScript, Express, Sequelize, GitHub, MySQL, SQL, and Node for the back end.

OTHER WORK EXPERIENCE

Cashier University of Richmond ETC, Richmond, VA

Fall 2023 - Present

- Managed student employees and maintained customer service standards, developing strong communication and leadership skills. Effectively delegated tasks and provided training to new employees. Maintained meticulous inventory control and display standards in a retail store, ensuring shelves were fully stocked and visually appealing.
